

MADE IN USA

What counts most is what's inside:

THREADS

Nalgene bottles and caps feature continuous, straight shouldered semi-butress threads for greater contact area on the surface. This allows for greater tightening force without stripping the threads.

CAP

The durable Nalgene cap is designed and made to perfectly mate with our containers. There is no separate liner to wear, crease, fall out or leak. The seal ring is molded directly into the cap.

FDA COMPLIANT AND BPA FREE MATERIALS

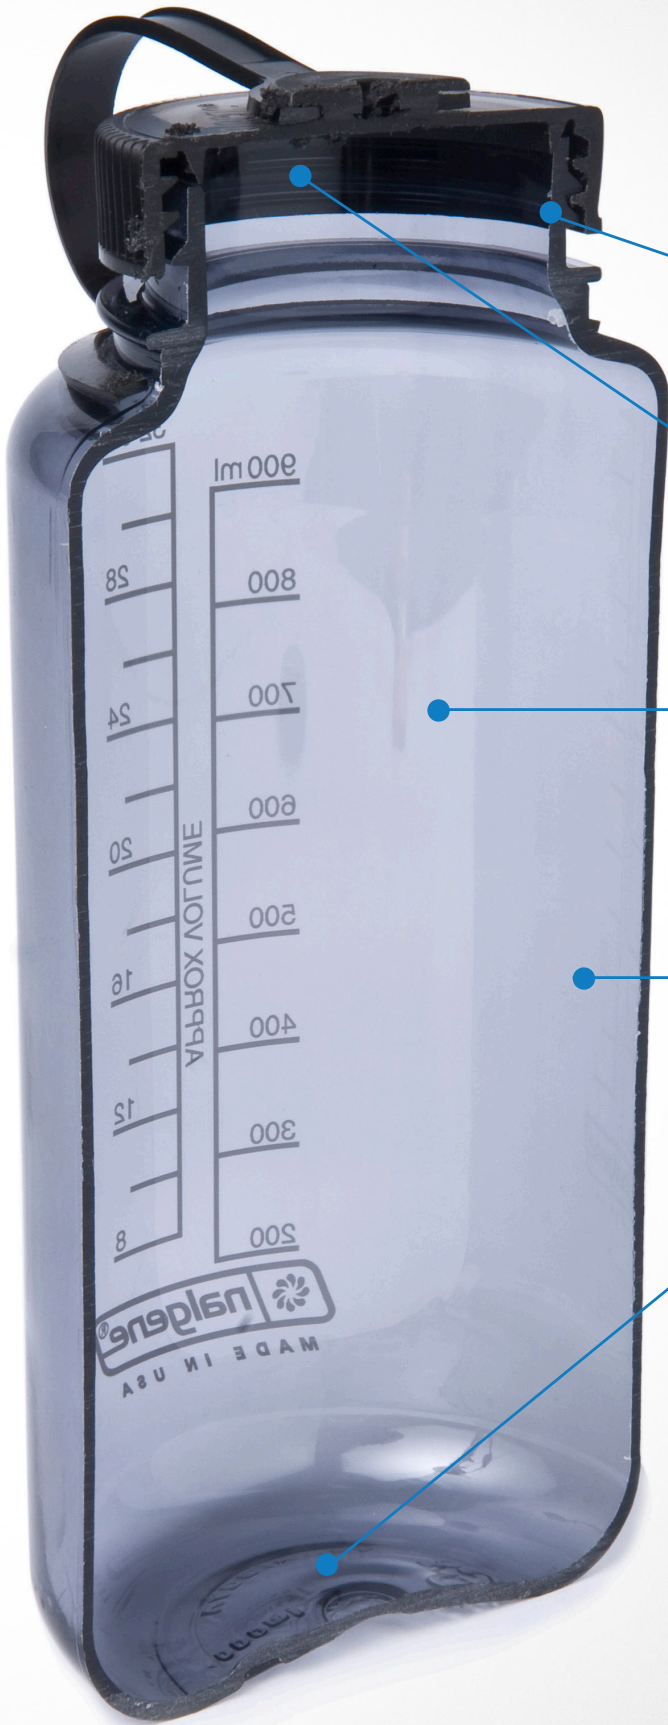

Nalgene bottles are molded from 100% virgin resin with nothing but FDA compliant colors added. The finished products are tested according to the requirements of the US FDA for food and beverage contact as published in chapter 21 of the Code of the Federal Register section 1580.

HEAVY DUTY WALLS

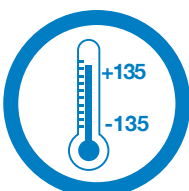

Uniform and durable walls are thicker and more resistant to failure than lower quality bottles.

BOTTOM

Inner corners are curved for easy cleaning. A plastic resin code is molded into the bottom of the bottles for eventual recycling after years of reliable service.

ATTACHED CAP • WIDE MOUTH OPENING • WITHSTANDS -135°C to +135°C • NALGENE QUALITY

IMPACT RESISTANT • NO LEAKS • NO ODOR OR RESIDUAL TASTE • GRADUATED MARKINGS
